Vishal Sriram

hello@vishalsriram.com ❖ vishalsriram.com ❖ New York City, NY ❖ US Citizen

EDUCATION

University of Illinois at Urbana-Champaign

B.S. Computer Science | Statistics Minor — *James Scholar | Dean's List | Summa Cum Laude*

Master of Computer Science — *Summa Cum Laude*

SKILLS

- **Languages:** Python, C++, C, Java, JavaScript/TypeScript (React), HTML/CSS, R
- **Technologies:** React, SQL, MongoDB, Bash, Redis, Spark, Hive, Hadoop, CUDA, AWS (CCP Certified)

EXPERIENCE

Ramp — **April 2024 – Present**

Staff Software Engineer — *New York City, NY*

- Defined and led a new work stream for building integrations for our Procurement Workflows, by defining a new roadmap and getting cross functional buy-in, resulting in the product scaling from 1 to 12 integrations in 5 months, introducing new abstractions to bring the time to build an integration from 3 months to 3 weeks, building out a framework for third party powered integrations to onboard into our app store and onboarding 5 partner led integrations to GA within a month of launching
- Architected and implemented new predictive AI systems for the accounting review process, allowing for automated flagging of suspicious or unusual transactions, grouping together related spend events for review, and weighting specific suspicious flags per company to ensure high signal alerts are presented
- Redesigned the requirement enforcement system while coding spend events for syncing to accounting software to allow for custom defined requirements and syncing of requirements from external ERP systems, reducing overall incident volume by over 50%.
- Restructured the permissions model for accounting related access, allowing for user defined custom roles within Ramp and formalizing the permissions relationship between front and backend elements

Ironclad — **Jan. 2022 – April 2024**

Senior Software Engineer — *San Francisco, CA*

- Led a cross-functional team restructure internal representations of customer data, allowing for more flexible schemas to be defined and allowing for more complex self service customer operations on their contract data within Ironclad, eliminating the need for support led data cleanup and organization projects.
- Designed & led development of a real time event stream processing system utilizing Redis, Red Panda, and Postgres to power event tracking across the platform, enabling the foundation for several product features including audit logs
- Designed and implemented a unified, human-readable identification system in Ironclad. Replaced separate UUIDs for different entity classes with a unified lookup system, simplifying access and improving functionality.
- Developed and implemented new process metrics in Ironclad to enhance users' ability to measure success, productivity, and speed of contracting.

Amazon Web Services — **May 2021 – Aug. 2021**

Software Development Engineering Intern — *Seattle, WA*

- Designed and developed a playground for the AWS Organizations Widget, interfacing with designers, as well as engineers from within and outside our team to design a new custom solution.
- Built an extensible solution using TypeScript and React by applying OOP and modular design and simplifying the UI/UX for internal customers to speed up integration of widget in other AWS services.
- Deployed a hosted CI/CD solution using S3, Lambda, and CloudFront to keep the application updated as new changes are pushed to the widget to maintain synchronization with production package automatically.

Synchrony Financial — **Jan. 2020 – Dec. 2021**

Emerging Technology Intern — *Urbana, IL*

- Led a team of 12 developers to develop a blockchain Proof of Concept within the pet insurance space to simplify the customer experience and improve operational efficiency (**Provisional Patent Filed**).
- Developed an MVP for a new product platform from the ground up within the employer healthcare space to make it easier for consumers to pay for healthcare services (**US20210065132A1**).
